AI SUCCESS PATTERNS - ROI WORKSHEET

6-Month Retainer - 6 months, $40,000

The GO Framework and AI Success Patterns, put to work across your organization - a roadmap, agreed goals and weekly progress.

74%
of companies see no measurable value from AI - and 70% of the problems are people and process, not technology. (BCG, 2024)

$186
per employee per month lost to AI "workslop" - low-quality AI output someone else has to fix. (BetterUp and Stanford, 2025)

80%+
of AI projects fail. The top cause: leaders never define the problem AI should solve. (RAND, 2024)

The investment

Kickoff workshop: AI roadmap and goal setting	**included**
Weekly goal sessions, 26 weeks	**included**
Starter packs for your roles; governance for every AI tool and agent	**included**
6-month engagement	**$40,000**
Total	**$40,000**

The return - a worked example (replace with your numbers)

1. Rework avoided 50 people x $186/month x 6 months = $55,800 at stake. If the patterns cut it in half:	**$27,900**
2. Time saved 50 people x 1 hour/week x $75/hour x 26 weeks	**$97,500**
Total value	**$125,400**

$125,400
value over 6 months

3.1x
return on the investment

24 min
per person per week saved to break even

Value the math leaves out

- A roadmap and goals leadership agreed to - the fix for RAND's top cause of AI failure
- Governance: who owns each AI tool and agent, and what it can reach
- Value from AI licenses you already pay for: 88% of HR leaders report no significant value from AI tools yet (Gartner, 2025)
- A common language for AI across every team

Bring your numbers

- Bring your AI usage report to the kickoff - it becomes the baseline we measure against.
- Your loaded hourly cost and headcount in scope - the example uses $75/hour.

Illustrative example, not a guarantee - results depend on your team and how the patterns are used. Rework figure is BetterUp's published estimate; halving it is an assumption.
