AI SUCCESS PATTERNS - PMO / EPMO LEAD STARTER PACK

Give your team a common language for AI.

Five named patterns your whole PMO can use in a sentence. When someone hands in AI slop, the question is ten seconds long: *"Did you run Avoid AI Slop?"*

Get started in 15 minutes

1. Unzip the pack. Inside is one small zip per skill.
2. In Claude: Settings > Capabilities > Skills - upload each one. (ChatGPT and Copilot versions coming.)
3. Open a new chat and say: **"Start here - I'm a PMO lead."**
4. Run one skill on real work this week - your next status report is a good first job.

The five skills - the Start-here path

	Pattern	Use it when
05	**Avoid AI Slop** with an LLM Interview	Writing a status report, business case or steering committee update. The AI interviews you first, so the draft carries what only you know.
25	**The Chat Is Not Your Memory**	Any work that runs past one session. Decisions, sources and the RAID log live in a project record the AI reads first.
15	**The Night Shift**	Portfolio health checks, report drafts and RAID reviews that can run while you're in meetings. Findings only - nothing changes in your PPM tool.
08	**Assemble the Team**	Before a business case or prioritization decision goes out. Hear the CFO, the skeptical sponsor and the delivery lead first.
12	**Ghost in the Workflow**	For every AI prompt, agent or automation your PMO depends on - so it outlasts the person who built it.

Say it out loud

- *"Did you run Avoid AI Slop?"*
- *"Is that in the project record, or just the chat?"*
- *"Put it on the night shift."*
- *"Let's assemble the team before this goes to steering."*
- *"Who owns that agent - is there a record?"*
