AI SUCCESS PATTERNS - PMO / EPMO LEAD STARTER PACK

Give your team a common language for AI.

Five named patterns your whole PMO can use in a sentence. When someone hands in AI slop, the question is ten seconds long: *"Did you run Avoid AI Slop?"*

Get started in 15 minutes

1. Unzip the pack. Inside is one small zip per skill.
2. In Claude: Customize > Skills - upload the six skill zips; you can select all six in one step. (ChatGPT and Copilot versions coming.)
3. Open a new chat and say: **"Start here - I'm a PMO lead."**
4. Set up one Claude project per project you manage (one more for portfolio work), with a project record from The Chat Is Not Your Memory and one short chat per task. No projects on your plan? Attach the record file to each chat.
5. Run one skill on real work this week - your next status report is a good first job.

The five skills - the Start-here path

	Pattern	Use it when
1	**Avoid AI Slop** with an LLM Interview	Writing a status report, business case or steering committee update. The AI interviews you first, so the draft carries what only you know.
2	**The Chat Is Not Your Memory**	Any work that runs past one session. Decisions, sources and the RAID log live in a project record the AI reads first.
3	**The Night Shift**	Portfolio health checks, report drafts and RAID reviews that can run while you're in meetings. Findings only - nothing changes in your PPM tool.
4	**Assemble the Team**	Before a business case or prioritization decision goes out. Hear the CFO, the skeptical sponsor and the delivery lead first.
5	**Ghost in the Workflow**	For every AI prompt, agent or automation your PMO depends on - so it outlasts the person who built it.

Say it out loud

- *"Did you run Avoid AI Slop?"*
- *"Is that in the project record, or just the chat?"*
- *"Put it on the night shift."*
- *"Let's assemble the team before this goes to steering."*
- *"Who owns that agent - is there a record?"*
