AI SUCCESS PATTERNS - ROI WORKSHEET

Start Here Workshop - $4,000

A half-day that leaves your team speaking the same AI language - with one pattern working on real work by lunch.

74%
of companies see no measurable value from AI - and 70% of the problems are people and process, not technology. (BCG, 2024)

$186
per employee per month lost to AI "workslop" - low-quality AI output someone else has to fix. (BetterUp and Stanford, 2025)

80%+
of AI projects fail. The top cause: leaders never define the problem AI should solve. (RAND, 2024)

The investment

Half-day workshop, onsite, up to 20 people (virtual $3,500)	**$4,000**
Travel outside Milwaukee, at cost (example; capped at $2,000)	**$1,000**
Total	**$5,000**

The return - a worked example (replace with your numbers)

1. Rework avoided 20 people x $186/month x 6 months = $22,320 at stake. If the patterns cut it in half:	**$11,160**
2. Time saved 20 people x 1 hour/week x $75/hour x 26 weeks	**$39,000**
Total value	**$50,160**

$50,160
value over 6 months

10.0x
return on the investment

8 min
per person per week saved to break even

Value the math leaves out

- Twenty people using the same five pattern names
- Only 42% of employees know where AI can improve their work (Gartner, 2025) - everyone leaves knowing one place
- A one-page summary of the three patterns that fit your group

Bring your numbers

- Pull your AI tool's usage report: only 5% of organizations that piloted Microsoft 365 Copilot were moving to a larger rollout (Gartner, 2025).
- Your loaded hourly cost and headcount in scope - the example uses $75/hour.

Illustrative example, not a guarantee - results depend on your team and how the patterns are used. Rework figure is BetterUp's published estimate; halving it is an assumption.
