AI SUCCESS PATTERNS - ROI WORKSHEET

Fractional Chief AI Evangelist - 6 months

The GO Framework and AI Success Patterns, put to work across your organization - with a roadmap, clear goals and weekly progress.

8 weeks	$97,500	3.2x
to pay back	6-month value	return

The investment

Kickoff workshop: roadmap and goal setting	**included**
Weekly goal sessions for 26 weeks	**included**
Starter packs for your roles; patterns tuned to your work	**included**
6-month engagement (proposed: $5,000 a month)	**$30,000**
Total	**$30,000**

A worked example - replace with your numbers

- 50 people in scope
- Each saves an average of 1 hour a week across the six months (ramping up as patterns roll out)
- Loaded cost of $75/hour
- Not counted: tool spend avoided by choosing the right tools (Pattern 17)

The return

Hours saved per week (average)	**50**
Value per week	**$3,750**
Value over 6 months (26 weeks)	**$97,500**
Return on $30,000	**3.2x**

Value the math leaves out

- An AI roadmap and goals your leadership agreed to
- Governance: who owns each AI tool and agent, and what it can reach (Pattern 12)
- A common language for AI across teams, not one team at a time
- AI measured by impact, not usage

Break-even: the engagement pays for itself if each person in scope saves about 18 minutes a week. The example uses illustrative assumptions, not measured results - your numbers will differ. Measure it: track hours saved on the tasks you choose in week one, then compare at week six.
