AI SUCCESS PATTERNS - ROI WORKSHEET

Starter Pack Setup

Your team's AI work, set up in a week - on your real work, in your tools.

4.2 weeks	$15,600	6x
to pay back	6-month value	return

The investment

Starter Pack Setup (per team, fixed)	**$2,500**
Total	**$2,500**

A worked example - replace with your numbers

- Team of 8 people
- Each saves 1 hour a week on drafting, status reporting and prep
- Loaded cost of $75/hour (salary plus benefits)
- Small business version: $750 for an owner plus 1-3 people

The return

Hours saved per week	**8**
Value per week	**$600**
Value over 6 months (26 weeks)	**$15,600**
Return on $2,500	**6.2x**

Value the math leaves out

- Fewer rewrites of AI-generated drafts nobody could defend
- A shared language: "Did you run Avoid AI Slop?" replaces a long conversation
- Work that survives turnover - records, not chats

Break-even: the setup pays for itself if the team saves about 10 minutes per person per week over six months. The example uses illustrative assumptions, not measured results - your numbers will differ. Measure it: track hours saved on the tasks you choose in week one, then compare at week six.
