AI SUCCESS PATTERNS - ROI WORKSHEET

Start Here Workshop

A half-day that leaves your team speaking the same AI language - with one pattern working on real work by lunch.

3.3 weeks	$39,000	8x
to pay back	6-month value	return

The investment

Workshop, onsite, up to 20 people	**$4,000**
Travel and expenses outside Milwaukee (example; capped at $2,000)	**$1,000**
Total	**$5,000**

A worked example - replace with your numbers

- 20 participants
- Each saves 1 hour a week by using one pattern on a recurring task
- Loaded cost of $75/hour
- Virtual option: $3,500, no travel

The return

Hours saved per week	**20**
Value per week	**$1,500**
Value over 6 months (26 weeks)	**$39,000**
Return on $5,000	**7.8x**

Value the math leaves out

- Twenty people using the same five pattern names
- Less AI slop reaching leaders and customers
- A clear next step: which three patterns fit your group

Break-even: the workshop pays for itself if each participant saves about 8 minutes a week over six months. The example uses illustrative assumptions, not measured results - your numbers will differ. Measure it: track hours saved on the tasks you choose in week one, then compare at week six.
